### **DETAILED ACTION**

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 15, 2009, has been entered.
2. Cancellation of claims 25 and 30 are noted.

### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dave Abrams on October 30, 2009.

The application has been amended as follows:

Please cancel claim 28.

#### ***Allowable Subject Matter***

4. Claims 10-24, 26-27, 29, and 31-34 allowed.
5. The following is an examiner's statement of reasons for allowance: The prior art of record does not appear to anticipate or render obvious the limitation of the claims requiring titania as a component of the catalysts. Indeed, it would not have been obvious to include titania into the support of the catalyst of Evans et al (US 4657664) since Olguin et al in *Applied Catalysis A* (1997, vol 165, pgs 1-13) discloses that the incorporation of titania reduces the

Art Unit: 1797

activity of Ni-Mo and Co-Mo catalysts [see Table 2 on page 4 and discussion under the heading "3.2 Catalytic activities"]. While Olguin et al discloses that the incorporation of titania affects the selectivity of the catalyst, there is no discussion of selectivity in Evans et al and, therefore, no motivation to combine a reference with a catalyst incorporating titania into the support or adding titania as a promoter onto the support. Myers et al (US 4619759) discloses a process similar to the instant application with similar catalysts except the order of the process steps is reversed and the Ni-Mo catalyst does not comprise titania. As discussed previously, it would not have been obvious to add titania to the Ni-Mo catalyst of Myers et al. Duddy et al (US 5925238) discloses a process similar to that recited in the instant application with Co-Mo and Ni-Mo catalysts on an alumina-titania support. However, the reference teaches a hydrogen to hydrocarbon ratio of approximately 23, which was calculated from information provided in example 1 including the API gravity of the feed, the catalyst volume, the LHSV, the feed rate, the partial pressure of H<sub>2</sub>, the reactor temperature, and the assumption that hydrogen behaves as an ideal gas. The assumption of an ideal gas does not appear to affect the result in a substantial manner that would cause the instant application to be unpatentable if the assumption were not made.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRIAN MCCAIG whose telephone number is (571) 270-5548. The examiner can normally be reached on M-F 8-430.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
